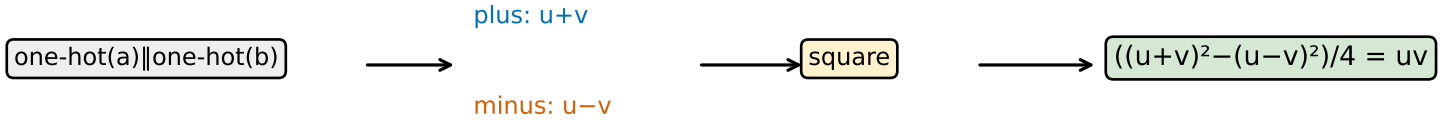
Product identity behind compact 8-unit constructions



u,v ∈ {cos θ, sin θ}
on VAL[a], VAL[b]

readout vs cos/sin(θ_c)
∝ cos(θ_a+θ_b−θ_c)

argmax_c → modular sum
(or sum of discrete logs)

Realized in gpt56solmedium_permadd_none_r0: 8 connected units, 12769/12769 correct (scored as-is).
